C-2009

100% Ethylene Glycol with Closed System Corrosion Inhibitor

APPLICATION:

PMC C-2009 is a concentrated liquid blend corrosion inhibitor, sequesterant and ethylene glycol. This is used in closed cooling and heating water systems for freeze protection. It combines proven organic ferrous corrosion inhibitors with copper (and alloys) corrosion inhibitors to provide complete protection against corrosion. C-2009 provides sequesterants to tie up any existing metal oxides and thus prevent their deposition on metal surfaces where they might accelerate localized pitting. C-2009 also contains polymers to disperse and condition hardness salts, reducing the insulating effect of deposits on heat transfer surfaces.

BENEFITS:

- * Pink coloured product for easy visual detection
- * Environmentally friendly
- * Excellent corrosion protection for ferrous and non-ferrous metals
- * Excellent freeze protection
- * Easy to monitor and control

FEEDING AND CONTROL:

PMC C-2009 should be fed as required by means of a pot feeder or automated glycol feed pump.

PRECAUTIONS:

Study Material Safety Data Sheet.

PACKAGING:

Plastic pails	25 KG
Poly drums	231 KG
